

Carriage Roller

Carriage Rollers - Carriage rollers are especially designed bearings which are used on lift masts to be able to help them operate within tough environmental surroundings. Lift masts are often subjected to shocks, oscillations, high dynamic and vibrations and static loads. This apparatus is often exposed to environmental influences such as dust, cold, heat, aggressive ambient air, moisture and contamination. Hence, the lift masts' guidance arrangements should be specifically strong and have a specific high load carrying capacity.

To be able to help compete in a lot of different environmental conditions, carriage rollers were designed for numerous lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
